

One-stop service - world-class, worldwide

Rapid Club Root Test

Club root causes root infection of brassica crops including vegetables and oilseed rape. Infection can lead to significant yield losses, therefore testing for club root spores in soil is important to make informed crop monitoring and management decisions.

What we need

Soil samples of at least 800g

Delivery address

Eurofins Agrosience Services, Slade Lane, Derbyshire, DE73 8AG

What we offer

Targeted PCR analysis to determine:

- The number of club root spores present
- High, medium or low disease risk score

What we guarantee

Accurate results in less than 10 working days

Discounts available for multiple samples.
